

...

Preface

The page style fancy, defined in the fancy-headings package, allows very elegant customization of the running header and footer of a document. The package provides three types of headers as well as footers, through which a header/footer can be made page-wise left, center or right aligned, or even multiple pieces of headers and footers can be used. The commands for such headers and footers are shown in Table 5.7, where `podd` and `peven` are the contents of the headers/footers on odd and

Chapter 1

First Chapter

The beginnig of first chapter.

1.1 First Section

The start of section one.

1.1.1 First subsection

The start of sub-section one.

First sub-sub-section

The start of sub-sub-section one. Sub-sub-sections are **not** numbered in case of **article** class.

Chapter 2

Running Header and Footer

By default, `/thispagestyleplain` is issued by the document-classes of `article`, `book`, and `report` to the `/maketitle` command and the first page of major sectioning commands, like `/part` or `/chapter`. To suppress the effect of `/thispagestyleplain` on these pages, `/thispagestyle` with an appropriate page style may be used just after the `/maketitle`, `/part` or `/chapter` command, e.g., `/thispagestyleempty` may be used to suppress the default page numbering on these pages.
